
Strategy of the Institute of Aviation

Warsaw, 18 December 2018

Paweł Stężycki, PhD Eng.
Director of the Institute of Aviation

Mission

The Institute of Aviation provides the highest quality R&D services to local and global industrial partners from the aerospace sector in order to obtain direct benefits for the national economy.

Vision

By 2024, the Institute of Aviation will become one of the leading research units in Europe in the areas of: design and testing of aircraft structures, missile engine technologies and technologies of autonomy and safety of unmanned aircraft systems.

Design and research of aircraft structures, with particular emphasis on materials and structures

Space technologies, with particular emphasis on rocket and remote sensing technologies

Technologies of unmanned aircraft systems, with particular emphasis on autonomy and safety

Finance

- **Achieving a profit on sales at a minimum level of 5% of sales revenue by 2022**

Organization

- **Introduction of process management in the organization**
- **Increase the efficiency of processes in the organization**

Human Resources

- **Ensuring continuity of personnel and competence**

Science

- **Maintaining a high level of scientific research**
